# Multi-Track Audio Capture for Take Recorder

Record multi-track audio with Take Recorder.

Multi-Track Audio Capture for Take Recorder **Take Recorder** provides options for recording audio. You can create multiple (up to 8) **Microphone Audio** sources in Take Recorder to record audio from multi-channel audio devices.

Each **Microphone Audio** source has an associated **Audio Input Device Channel** that designates the input channel on the selected audio device. Up to 8 channels are supported via the **Windows Audio Session API**. It is important to note that the audio device must have **Windows WDM multi-channel support** in order to have 8 channels available. There are third-party audio device manufacturers that offer Windows WDM multi-channel support.

See [Microphone Audio Recorder](#) and [Audio Input Device](#) sections for more information about these audio settings.
